

Multiples Deliveries in Los Angeles County by Mother's Race/Ethnicity and Age (2004- 2006)

- In 2005, 1.57% of all live births in Los Angeles County were multiple deliveries.
- In 2005, White women in Los Angeles County had the highest percent (2.7%) of multiple deliveries as compared to Black, American Indian, Asian, Pacific Islander, and Latino women. However, Pacific Islander women had the highest rate of delivering triplets (0.17% compared to 0.13% for White women).
- In 2005, only 1.18% of Latino women had multiple deliveries.
- From 2004 through 2006, on average, there were 970 singleton deliveries, and 30 multiple deliveries per every 1,000 live births in Los Angeles County.
- Perhaps not surprisingly, from 2004 through 2006, women 40 years and older in Los Angeles County had the highest ratio of multiple deliveries (72.9 per 1,000 live births).
